

IN THE SEAGRASS

The humpback red snapper (*Lutjanus gibbus*) is in its juvenile stage. The protection provided by the seagrass meadow allows them to feed and grow, while hiding from their predators.

**Humpback
red snappers
mature at 2.5
years at
about 21.5cm
in length.**

IN THE MANGROVES

Juvenile humpback red snappers find refuge and grow in the shelter of the mangrove roots.

INTERCONNECTED ECOSYSTEMS

ON THE CORAL REEF

The humpback red snapper is in its adult stage, sometimes forming large schools. This is where they go to produce the next generation.

**Humpback
red snappers
can grow up to
50cm long and
live for up to
18 years!**
